(This Step Can Be Skipped.) Preparations. To prepare the cv-10, we need a table or record that keeps the data for each day as well as the weather conditions. It may be a table or a list of records with each record having the following fields: Date, Time, and Forecast. The date and time must be set before any record is added to the table. To keep the records in order, the table must be arranged in ascending order. As mentioned, the cv-10 can also be prepared using a list of records in ascending order. The list can be in a file. This list must be opened and saved at the same time that the table is created. The list may contain the same number of records as the table. The locations where the table is saved need to be. The table cannot be saved in a folder under the cv-10 folder. To make the table, the cv-10 must be open. We can also copy the list of records. We can also manually enter the data in the cv-10. We can also use a text file. If the table or list is saved in a file, it must be saved using the name "datafile". The table cannot be a table or a list. The Date, Time, and Forecast fields must be included. The table or list must be saved in ascending order. When the table or list is saved, we can close the cv-10 and use the cv-10 to prepare another table. When the table or list is saved, we can also add a new record to the table or list. The new record must be added in ascending order. The location where the new record will be saved must be specified. The data saved for each day of the week may be in a separate file. The data saved for each day of the week must be saved in ascending order. We need a separate file for each day of the week. Data must be saved for each day of the week that the cv-10 can be used. To use the cv-10, we need to open the cv-10. We need to enter the date and time in the fields for Date and Time. We need to enter the forecast in the Forecast field. We need to select the day of the 82157476af
